

SEWING GUIDLINE

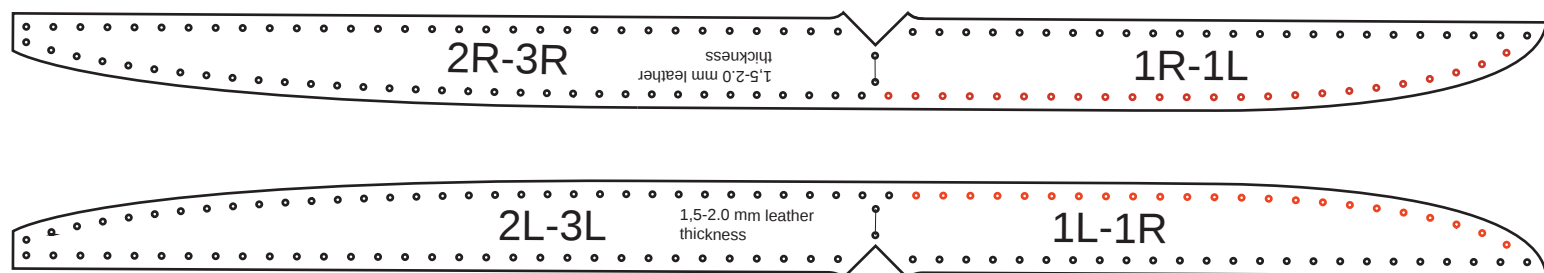

In this guide, I will try to show you the order and how to connect the most important elements. This guide is a supplement to the video tutorial available on youtube.

VIDEO TUTORIAL

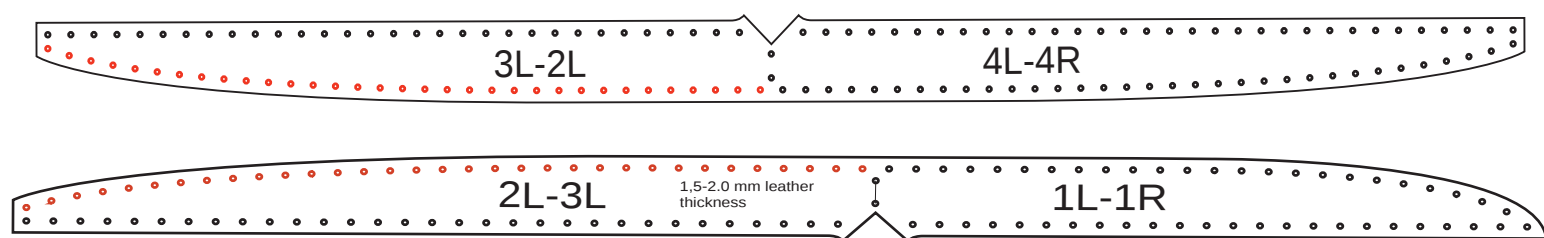

1. Start by sewing the crown pieces together. Use a cross-stitch (cross inside the crown). I also advise you to label each element in some invisible place. This will make it easy to assemble the entire helmet parts correctly.

2. After sewing the crown, we proceed to sew together the strips used to create the comb. Start from sewing parts 1L-1R (red holes) flesh to flesh. Use saddle stitch.

3. Do the same with parts 2L-3L.

After a while, you will create something like this

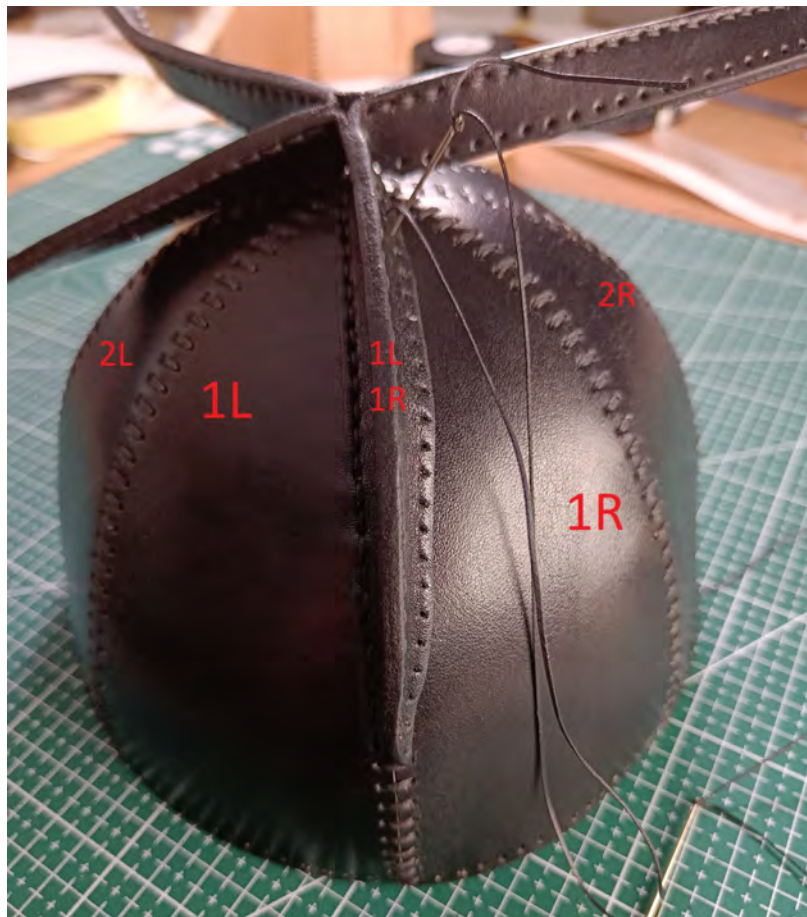

Continue stitching the rest of the pieces. (4L-4R ; 3R-2R)

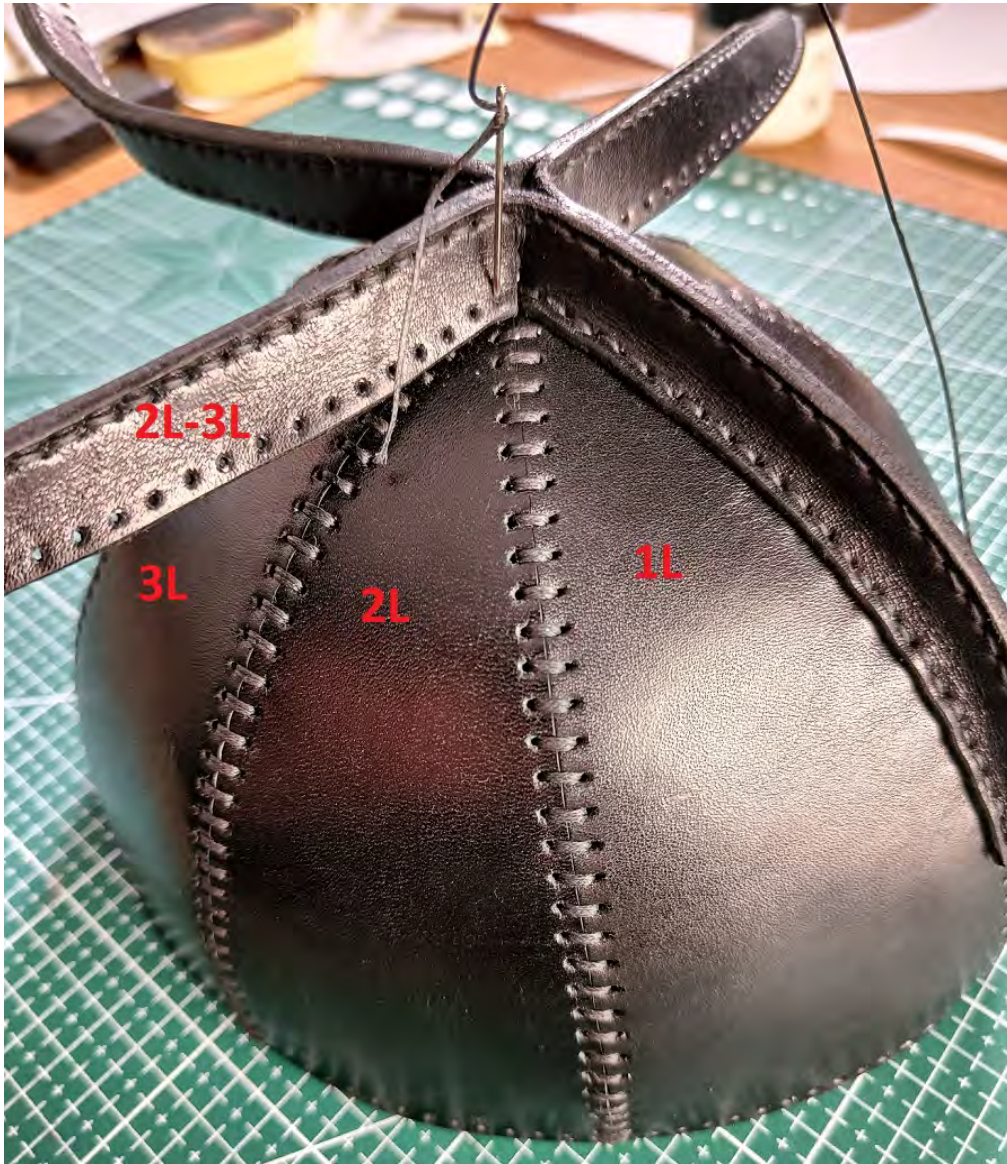

4. Finally, sew through the center of the comb. There are two pairs of holes on each side.

5. Now start sewing the comb to the crown. Connect the front parts. Start sewing from the top. Use saddle stitch.

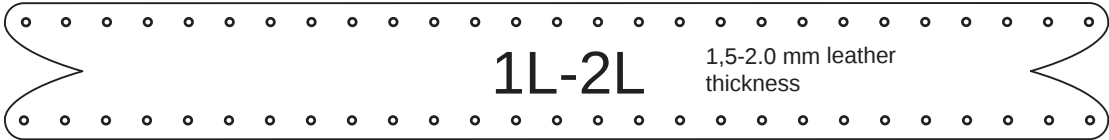

6. Sew the rest of the elements in proper order.

After a while you will have the crown with the combs.

7. Now sew on the smaller combs. Start sewing from the second hole from the bottom.

8. Now mark the holes for mounting the "eagle". Then make holes and screw the element.

9. Do the same with the badge.

10. Now it's time to attach the welt to the brim. You can start at any point you want. After you made a few stitches put the wire inside the welt.

11. Before connecting the brim to the crown, mark the starting point for sewing. Then, using saddle stitch, connect both elements.
