

BIC Lighter Case

Instructions:

Use vegetable tanned leather around 3 oz (1-1.5 mm thick). The holes are marked for 3.85 mm pricking irons. The half-holes in the center can be punched with 3/8" round punch.

Burnish the edges :) I only burnish the upper sides that will be exposed.

Cut out the pattern, make the holes, stitch one side with baseball stitch. Insert the lighter, stitch the other side tight with baseball stitch.

Case the whole product (soak it with wet cloth) and push the lighter all the way in as far as possible so the case covers the lighter up to the metal part, Shape the bottom against a flat surface. Leave to dry.
