Hello.

I always miss another pocket on my jeans. There is always a thing that has nowhere to put. So there was an idea to make a "third pocket" bag.

This bag attaches to the strap through the eyelets, which allows it to be fastened from either side without hindering movement.

How to craft:

First of all, cut along the cut line of the bag parts and connect parts A and B together.

Second, you need to attach all the straps to their place.

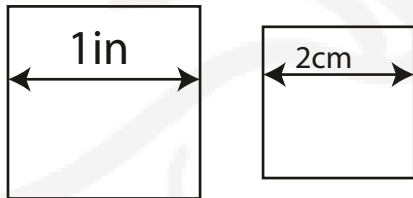

I used 10oz (4mm) leather. If you use the same one, then I recommend thinning the edges with a blade where you need to stitch. This will make the product thinner.

Then set the volume of the bag by sewing the side parts.

After that, proceed to sewing the decorative seams of the upper flap.

And after all, start sewing the two halves starting from the 0 (zero) point at the bottom of the bag.

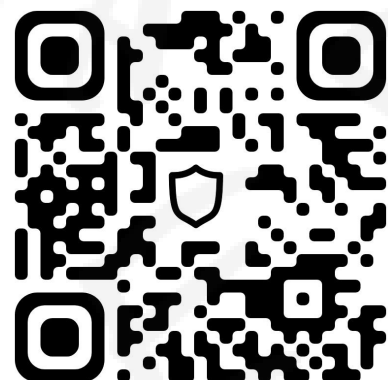

Test square

Hello guys!

I have decided to share my sewing patterns for free. However, I would be very grateful for your donations. Due to the current situation in my country, I am unable to receive payment for my work.

Thank you to everyone for your generosity!
